

## CREDANT Solutions for the UK Public Sector

IT security products sold to public entities in the UK require the CCT Mark of assurance.

### CREDANT SOLUTION

*Backed by CCTM certification, CREDANT Mobile Guardian (CMG) provides Government entities with IT security solutions that meet their security requirements – regardless of where the data resides.*

#### Only CMG enables organizations to:

- › Encrypt and secure data across multiple, diverse platforms from a single console.
- › Provide a transparent end-user interface that supports user productivity while keeping data safe.
- › Create automatic activity reports that record data access and offer proof of end-to-end data security.

*CMG's Intelligent Encryption provides a centrally-managed, highly scalable and architecturally flexible solution to manage all data endpoints. With CREDANT, public and private organizations can:*

- › Deploy a highly scalable solution – with minimal change to existing IT infrastructures.
- › Support the automatic generation and escrow of encryption keys by the server, reducing the risk of unwarranted data access.
- › Add data security with little or no impact to end user or IT productivity.

### Requirement overview

“Government information systems must use appropriate security products and services which have a minimum assurance of the CCT Mark,” according to the Central Sponsor for Information Assurance (CSIA) in the United Kingdom.

Awarded by the CESG, the National Technical Authority, certification for the CCTM provides a Government quality mark for the public and private sectors based on accredited, independent testing. The award is designed to prove the validity of security functionality claims made by vendors. Simply put, the CCTM helps assure public bodies that an IT product or service does “what it says on the box”.

The CCTM is intended primarily for IT products and services to ensure that they meet information assurance requirements at Government Impact Levels 1 and 2. Certification is required for purchases by central government entities. It also applies to purchases by the wider public sector, particularly the National Health Service (NHS), schools, local authorities, police departments and criminal justice entities.

Furthermore, the CCTM satisfies the minimum assurance requirements for use in systems supporting the Transformational Government agenda.

### Certified solutions with CREDANT

After rigorous government testing, CREDANT Technologies was awarded the CCT Mark for the CREDANT Mobile Guardian (CMG) Enterprise Edition. This award provides a seal of approval for Government entities to purchase CMG security solutions.

In addition, CMG has been validated by the Common Criteria Evaluation and Validation Scheme (CCEVS) process. Like the CCTM, this ensures both public and private sector clients that CMG has passed the highest levels of scrutiny and security testing.

### CREDANT

More than 700 organizations -- including departments and agencies in some of the world's largest governments -- rely on CREDANT to protect data, ensure security, and support IT-based productivity.
